The Great Wall of China, one of the <u>worlds</u> most iconic and famous landmarks, stretches over an astounding 13,000 miles across northern China. Built <u>during</u> centuries by various Chinese dynasties, <u>served</u> as a formidable defensive structure against invasions by the north. Contrary to what most people believe, the Great Walll <u>not is</u> a single continuous structure but rather <u>some</u> series of interconnected walls, forts, and inyermittitent watchtowers. <u>It's</u> construction began as early as the 7th century BC and continued through the Ming Dynasty in the 17th century AD. <u>Although</u> its historical significance much of the wall <u>deteriorated</u> in recent times due to extensive tourism and even vandalism. However, it <u>yet</u> remains a symbol of China's rich cultural heritage and <u>resilence</u>. It attracts thousands of tourists every year and numerous strategies have been invented to attract tourists to one site over another, the most innovative being a <u>rapidly</u> descent via bobsled. Perhaps one of the most unique <u>exit</u> ever invented.
